Apple added a new Screen Recording tool, here you can take more than just a screenshot, screen recording enables you to take a numerical recording of the contents on the iPhone or iPad screen. Whether it's making video tutorials, advertising your business to customers online. screen recording software is a vital tool for small businesses, it is convenient when you want to share something with a friend or explain instruction for how to use something. The status bar at the top of your phone's display will turn red when it's actively recording. Once you stop recording, the video is saved to the Camera Roll on your device. you can also use audio and record your voice during the screen recording or you can turn off the microphone and record only the sound coming from within the app you are using.

The screen recorder can also be added into your control centre. Control centre gives you instant access to dozens of features on your iPhone with just a swipe. Because of control centre you can quickly take a picture, turn on flashlight, set your alarm etc, without having to open an app! Control

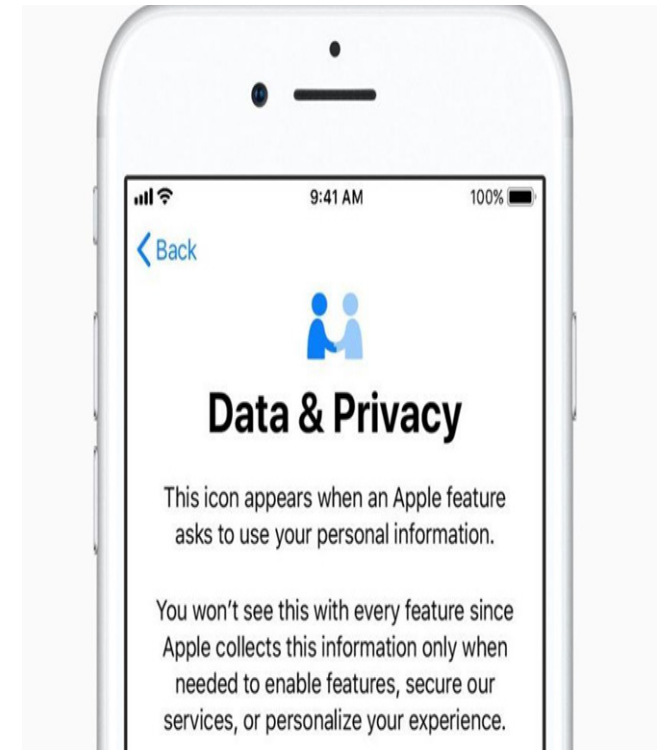

centre can be opened anywhere on your phone, from any opened app and your lock screen.

The latest IOS 11 that runs on the iPhone was embedded with a screen recording function. It comes in handy if you need to record the zoom meeting on your iPhone, where you can without difficulty capture the discussion. Zoom is a meeting that concentrates on providing virtual meetings, tutorials, where one person hosts, and the other members have equal footing. This meeting can hold up to 100 participants, which is great for company meeting or demonstrations. It is a cloud-based tool making it proficient of showing both presenter and the viewers screen.

The screen record feature in iOS11 is a perfect example of a technology that has a mix of safety potential and privacy concerns. There are many successful features within the apple screen recording, although there are some negatives. This new feature is a great graphic tool, especially for educational purposes, but can also be a confidentiality risk if not used appropriately. The safety and privacy of screen recording is often unnoticed. It records video footage of anything and everything that is on your screen, such as confidential information of bank account details and can be accidentally leaked online, private messages, live videos from apps and social media. You can use it to save any content and send to anyone.

Not all phones and tablets come with the option to easily record something on screen. Apple has made it easier and convenient

for their customers. They have targeted people who work in a business, record video games for YouTube etc, and have positively succeeded. You have the option to record something whenever you want on screen and have it saved into your own camera roll, having control where you put it out.
